"The WEEE Compliance Scheme for all Lighting"

An overview of WEEE today

The main purpose of the Directive is the protection of the environment and human health. This policy is intended to promote greater efficiencies in the management of waste from this type of equipment. Producers must also be registered with the national authorities in any Member State where they place EEE onto the market either directly or by appointing an authorised representative to act on their behalf. The Directive provides that Member States must establish systems for the collection, treatment, recovery and environmentally sound disposal of most types of waste electrical and electronic equipment (“WEEE”)
