

Energy Storage - developments, issues and considerations

Friday 16th June 2017

Venue - Walker Morris LLP, Kings Court, 12 King Street, Leeds, LS1 2HL

10:00am for a 10:30pm start

Content

APSE Energy and Walker Morris LLP are running a joint workshop focussing on energy storage and issues for consideration by those looking to invest in this technology.

Battery storage is a high profile topic for many involved in the energy sector and it is something that local authorities also need to be informed about. It is vital that APSE Energy members are fully informed about the technology so they do not get carried away with the hype. It is just as important that they understand issues the legal and procurement questions that can arise and how the technology may develop as well as an investor's perspective.

Speakers at this event will include legal experts from Walker Morris, a technology expert, an investor and 3 battery storage provider. Each will identify and explain relevant issues and answer questions. The battery storage providers will explain their approach to using the technology, how they can support local authorities and refer to projects they have undertaken.

Energy storage offers many benefits to local authorities and this is a further topic which those with energy and asset responsibilities within councils need to be up to date with.
