The Dangers of Using Unsupported Software

Cemetery Management Reimagined.

#1 No Security Protection

What does this mean for you?

- With no security patches you're vulnerable to a security breach
- Vulnerable servers open up an organization to the prospect of unauthorized access to it's confidential information

#2 System Failure

- Provision of services grind to a halt
- Increase risk of mistakes
- Increased costs of trying to fix the system
- Decrease in productivity
- Affect staff morale

#3 Increased Costs

- Hiring IT Contractors
- Cost of time
- Potential Legal Costs
- Implementing a new system in a hurry

#4 Future Planning & Flexibility Limitations

Are you limiting your future development?
