Enfield to invest £58m in low carbon heat and hot water to 15,000 homes.

30 January 2017 4:00 pm | By [Tim Clark](#)

Enfield Council is to invest £58m to develop a community energy firm to supply low carbon heat and hot water to 15,000 homes.

AN ENERGY company set up to fight climate change and 'revolutionise' north London's energy future has been given £58m by Enfield Council.

The council has created its own energy firm to supply heat and water to more than 15,000 homes and businesses in the next four years.

Last week it backed the £85m business plan for the new company – energetik - to develop, and run, four energy networks to supply low carbon heat and hot water.

The council says energetik's customers will be charged a fair price and get better customer service than a private-sector energy company provides.

Enfield's £58m will be supplemented by the company's own income, with energetik's business operations bringing the total up to £85m over the next 40 years.

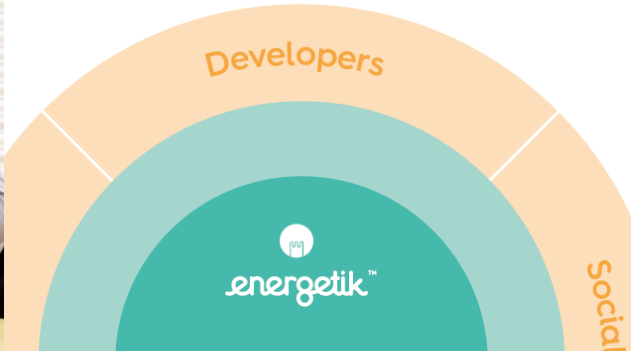

A series of heat networks: consistent service and quality

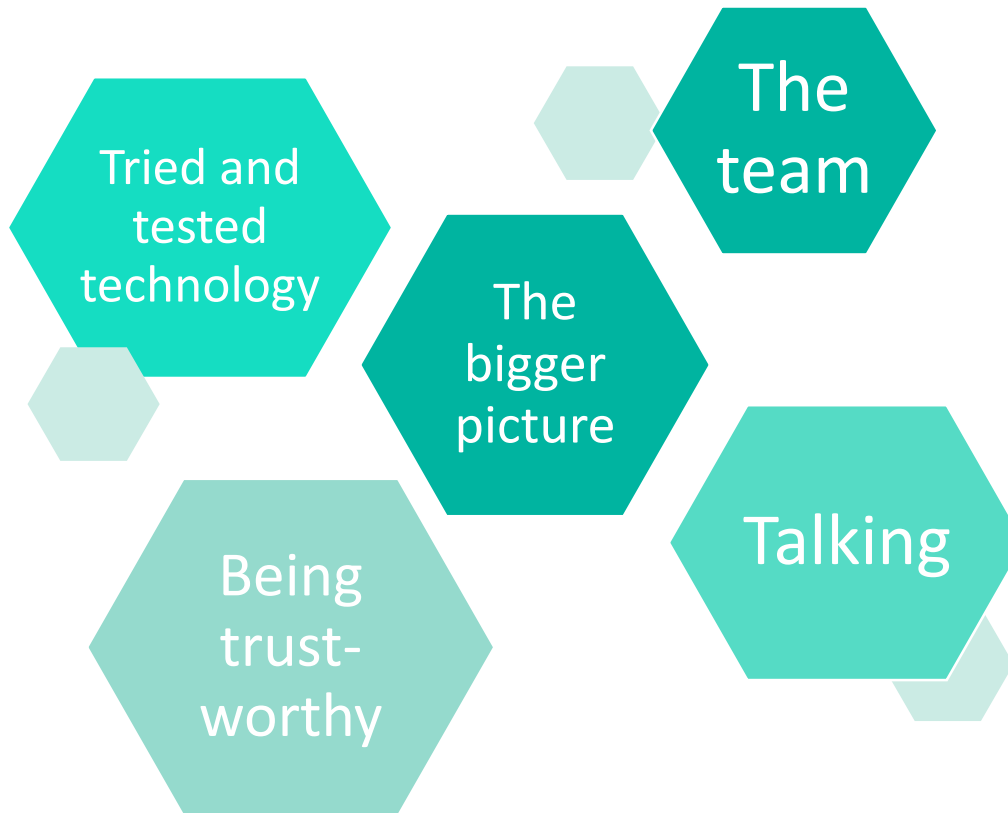

Putting customers in the centre
