LIVERPOOL LIVERPOOL LIVER

CONTENUR to open its first UK
manufacturing plant in Liverpool:

LIVERPOOL

CONTENÜR

Local production

coming to the UK

CONTENUR is committed to providing a more flexible and sustainable service as we embark on our exciting new project: the opening of a new manufacturing plant in the UK. Construction has now started on the 56,500 m² (47,000 m² of factory and 5,300 m² of offices) in Knowsley, Merseyside. The new factory will bring local, faster, more flexible and more economical manufacturing solutions to both our existing and new customers as well as reducing delivery lead times. We estimate to be operational by the last quarter of 2020.

This factory perfectly complements our current production facilities in **Spain, Poland** and **Brazil**.

CONTENUR designs, manufactures and markets comprehensive container solutions for plastic wheeled bins and underground refuse systems, improving quality of design, sustainability and the appearance of waste containers in our cities. For over 35 years, CONTENUR has been

fully committed to the core values of: market leading innovation, highly respected products and process quality, a sustainable approach to the environment and development on an International scale. We are a true leader in key markets and operate in over **50 countries worldwide**.

Value

We see value as being better at meeting and exceeding the needs and expectations of our customers. **The UK factory will offer bespoke solutions and services that exceed our current product and service offerings.** From short runs to stock holding and even a closed loop, end of life bin recycling service. We will have the local production facility to complement our local customer management team. Ask us about how we can support you with your specific needs.

Sustainability

We are aware of the industry's impact on the environment. That's why we use **renewable energy** and **recycled material** to promote sustainable technologies and policies that promote traceability and accountability of the material we use. For example, we are the first wheeled bin manufacturer in Europe to achieve the OCS accreditation for ensuring we do not pollute the local environment from our operations. Our position on sustainability is clear, and it stands at the top of our priorities. **There is no Planet B** and our future success depends on the commitments we make today. See our sustainability reality: **Circle**.

Quality

We are constantly working to achieve the **highest levels of quality** and **processes across our business**. Strict control of materials and production phases ensure compliance at the highest level of industry standards. Compliance is essential for providing our customers with a proven world class product. We promote these standards openly as the benchmark of our business and have all the quality, environmental and sustainability accreditations that you would expect of a global organisation.
