

# APSE PERFORMANCE NETWORKS

**Annual Seminar – 2023**

**Monitoring Progress on Climate Change**

**A Front line Perspective**

**Paul Wright**

# Challenges for Front Line Services

**Our services are by their very nature energy hungry.**

**And some of our equipment does not particularly lend itself to electric battery power.**

# Creating the Infrastructure

We need to create a new infrastructure and one that will allow us to deliver key public services but not at the cost of further damaging our planet.

# The Cost

Cost of Traditional Diesel Powered RCV  
= £220,000

Cost of electric RCV  
= £450,000  
(plus cost of infrastructure alterations)

With many local authorities struggling to balance budgets this is going to be a real challenge.

# A New (Old) Way of Doing Things?
