

Street Weeder with Honda engine.

The solid frame in connection with the powerful Honda engine, the big wheels and the handlebar allows vibration-free working over a long time with hardly noticeable lateral forces. The brushes are individually adjustable. If wear occurs, the brushes can be pushed back by the quick-change

system without tools. A splash guard protects against flying stones and damages. The brush head can be adjusted in the inclination. The handlebar is foldable and height adjustable without tools. It can also be pivoted to the side. The eight braided steel wires remove moss and weeds from hard surfaces without the use of chemicals or thermal treatment. Due to a balanced distribution of weight and large wheels, the weed brush offers excellent agility. Vibrations and lateral forces are minimized by the combination of a stable frame with large wheels and steering boom.

Estimated cost £2150.00 ex. vat delivered.
